## OBJECTIVE

Senior software developer with more than 4 years of experience fueled by a passion for crafting exceptional software experiences that people enjoy using. Throughout my career as a software developer, I have focused on developing scalable and well-documented code. I enjoy working collaboratively but can also handle projects independently. Enthusiastic about the opportunity to contribute to a dynamic company focused on delivering innovative products.

## LANGUAGES

- English
- Azerbaijani

## PRIMARY SKILLS

Javascript, Typescript
100%

ReactJS (NextJS, React Native)
100%

NodeJS (Express, TRPC, NestJS)
100%

PostgreSQL (DrizzleORM, Knex)
100%

AWS
100%

GCP
80%

MongoDB
80%

GraphQL (Apollo Client)
80%

## EDUCATION

2016-2020

- **Computer Engineering**
  ADA

## EXPERIENCE

03/2020 - 01/2022

- **Full Stack Software Developer**
  Kernel LLC
  - Full Stack developer of web based project of Bus Routes System of Azerbaijan. I was integrally involved in all phases of the project's lifecycle. The web client leverages ReactJS and responsive web design for mobile and desktop devices.
  - Built CI/CD pipelines that decreased deployment times by 40%, check against regressions, build applications and reliably deploy them to cloud instances.

- Participated in development of Taxi App which includes migrating dashboards from Angular to React, cross-platform apps using React Native, building api services as microservices and etc.
- **Technologies used:** Typescript, NodeJS, ReactJS, React Native, PostgreSQL, Firebase, Github actions, Nginx, Linux

10/2022
-
01/2024

- **Full Stack Developer**
  AMC Bridge

  - Full Stack Developer for a laundry network application that connects users with the nearest laundry service and manages pickups and drop-offs with real-time tracking. I played a key role in developing various aspects of the project, including mobile apps and web-based dashboard applications.
  - Frontend Developer for company's website migration and redesign project. Rebuilt the frontend of over 15 pages and developed fully responsive pages tailored for Japanese users.
  - **Technologies used:** Flutter, Javascript, JQuery, Typescript, ReactJS, NodeJS, PostgreSQL, SCSS, Gulp

04/2024
-

- **Senior Full Stack Developer**
  Medusa Group

  - Leading the frontend development efforts, focusing on building dynamic and responsive web applications using ReactJS. Collaborating closely with cross-functional teams to deliver high-quality, user-centric solutions. Responsibilities include optimizing performance, ensuring code quality, and mentoring junior developers.
  - I have contributed extensively to backend services, leveraging NestJS with TypeScript to build robust and scalable GraphQL APIs. My work involved designing and implementing efficient data models, ensuring seamless API integrations, and optimizing performance to enhance user experience.
  - **Technologies used:** Typescript, NextJS, NodeJS, NestJS, GraphQL, Apollo client, React Query, Ant Design

# SIDE PROJECTS

- **Multiplayer footballer guessing game**

  - Developed a multiplayer game where players guess the names of football players based on clues within a specified time limit. The game includes several modes: a daily updated challenge, a single-player mode, and an online multiplayer mode for 2-5 players.
  - **Technologies used:** Typescript, NextJS, WebSockets, Cloudflare D1, Cloudflare KV, Cloudflare R2, Cloudflare Workers and Pages, Cloudflare Durable Objects
  - **Link:** https://guessthefootballer.com
  - **Source code:** https://github.com/sofiyevsr/guess-the-footballer

- **News Aggregator**

  - Developed an app that aggregates news from over 50 curated sources in four languages, updating every three minutes. The app was archived and removed from stores as of January 2023.
  - **Technologies used:** Flutter, NodeJS, Golang, NextJS, PostgreSQL, NGINX
  - **Used AWS Services:** EventBridge, Lambda, EC2, RDS, S3, CloudWatch
  - **Source code:** https://github.com/sofiyevsr/stolk

- **Asynchronous state management for Flutter**
  - Developed an unofficial port of React Query for Flutter to use in personal projects for fetching and caching remote resources.
